53	Living alone
54	Frailty
55	Frailty by ethnicity and age
56	Frailty detailed ethnicity
57	Multi-morbidity
59	Unemployment
60	Mortality: Premature deaths

- Male life expectancy in Stratford PCN is **below** the Newham average.
 - On average, a male born in Stratford PCN will live **1.1 years less** than the average male born in
- Female life expectancy in Stratford PCN is **similar** the Newham average.
- The rate of premature mortality for Stratford PCN is **above** the Newham average (19.2 per 100k patients).
- For Stratford PCN, child immunisation uptake (at 1, 2, & 5 years) is **similar** to the Newham average.
- The prevalence of coronary heart disease and stroke for Stratford patients are **below** the Newham average.
 - The percentage of heart failure patients with a review is well **below** the Newham average (13 percentage points).
- For Stratford PCN, cancer prevalence and emergency admissions (for cancer) are **similar** to or **above** the Newham average.
- For Stratford PCN, the prevalence of depression and long term mental illness are **above** the Newham average.
- The prevalence of obesity, diabetes, and hypertension for Stratford patients are **below** the Newham average.

Key:

Worse than the Newham average

Similar to the Newham average

Better than the Newham average

Demographics: Age and gender

Stratford PCN Age profile by gender

Age band	Stratford PCN	Newham
0-9	11.7%	15.1%
10-19	11.0%	12.0%
20-29	16.8%	18.6%
30-39	23.6%	20.1%
40-49	16.1%	12.9%
50-59	10.6%	9.9%
60-69	6.0%	6.3%
70-79	2.8%	3.2%
80+	1.5%	1.9%

WE ARE NEWHAM.

Data source: NHS digital

- The population of Stratford PCN in 2021 (based on figures from NHS Digital) was made up of 61% males and 39% females (total number = 60,672)
- The 30-39 year age bracket has the highest proportion of the population at 24%

People at the Heart
of Everything We Do

[Back to contents](#)

Cancer: 2 week wait referrals – conversion/detection rate 2021/22

2 week wait referrals - GP Practices showing detection and conversion 2021/22

Conversion = 2ww referrals resulting in a diagnosis of cancer

Higher conversion percentage means that a higher proportion of 2 week wait referrals for suspected cancer resulted in a cancer diagnosis.

Detection = cancers referred via the 2 week wait referral

A higher detection percentage means cancers have been detected via referrals through the 2 week wait system, as opposed to emergency admissions for example.

Living alone

Residents living alone by Ward (all ages)

Residents living alone by Ward (80+)

Patients 65+ with recorded frailty score by Practice

- The data is a snapshot as at 1st April 2020
- Patients in this data are those with a frailty score recorded between 2016-2020
 - Score 0 to 0.12 represents patients without frailty
 - >0.12 to 0.24 represents patients with mild frailty
 - >0.24 to 0.36 represents patients with moderate frailty
 - >0.36 represents patients with severe frailty

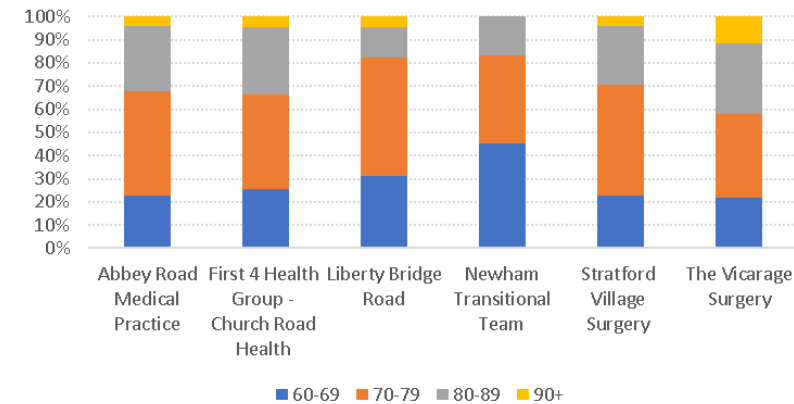

Frailty by ethnicity and age

Patients aged 65+ with mild, moderate or severe frailty by gender

- The data is a snapshot as at 1st April 2020
- Females account for the highest proportion at 58% compared to 42% males
- Data by age band shows the highest proportion to be in the 70-79 age band for a majority of practices
- The graphs below show a split by Practice and ethnicity for mild, moderate and severe frailty scores

All frailty (mild, moderate and severe) by age band

Mild frailty aged 65+ by practice and ethnic group

Moderate frailty aged 65+ by practice and ethnic group

Severe frailty aged 65+ by practice and ethnic group

Frailty showing detailed ethnicity

Proportion of Asian ethnicities by GP Practice

Proportion of Black ethnicities by GP Practice

Proportion of White ethnicities by GP Practice

- Asian ethnicities make up 32% of all Stratford PCN patients with mild, moderate or severe frailty
- The chart above shows a breakdown of the Asian ethnic groups for residents with mild, moderate and severe frailty scores
- Total counts for all Asian ethnicities are shown for each practice

- Black ethnicities make up 25% of all Stratford PCN patients with mild, moderate or severe frailty
- The chart above shows a breakdown of the Black ethnic groups for residents with mild, moderate and severe frailty scores
- Total counts for all Black ethnicities are shown for each practice

- White ethnicities make up 33% of all Stratford PCN patients with mild, moderate or severe frailty
- The chart above shows a breakdown of the White ethnic groups for residents with mild, moderate and severe frailty scores
- Total counts for all White ethnicities are shown for each practice
